Low Emission Zone - vehicles with non-Polish license plates required to register

2026-01-29

This is to remind you that all vehicles entering the Low Emission Zone in Kraków (SCT) are subject to specific requirements. Particular attention should be paid to vehicles registered outside Poland – they must be entered in the system regardless of whether they meet the required exhaust emission standards.

Vehicle registration is carried out exclusively via a dedicated online system, available [here](#).

The system is user-friendly, available in several languages, and allows for quick vehicle registration prior to entering the LEZ.

We encourage you to review the available materials and to complete the registration requirement before your planned entry into the LEZ.
