Airbus to Open Engineering Center in Kraków

2026-09-11

Kraków is strengthening its position as a European hub for modern technologies and advanced industrial services. Global aerospace company Airbus has announced plans to open a new engineering center in the capital of the Małopolska Region, creating hundreds of highly skilled jobs for engineers, software specialists and technology professionals.

The new facility will focus on the design and development of solutions for the aviation industry. The Kraków-based team will work closely with Airbus's international operations, contributing to projects that support the future of modern aviation.

The decision to invest in Kraków once again confirms the city's attractiveness to global high-tech companies. Its key strengths include a strong academic community, access to a highly qualified workforce, and a well-developed ecosystem of technology, engineering, and research and development companies.

The new engineering center is another international investment reinforcing Kraków's reputation as a place where innovative solutions with global impact are developed. It also reflects a broader trend of locating advanced engineering and digital projects in the city, bringing together experts from around the world.
