Time Crystals - International Workshop

2019-10-11

Time crystals are quantum systems which are able to reveal condensed matter behavior but in the time domain. The aim of the workshop on 'Time crystals and Related Phenomena' is to bring together experts and young researchers working on time crystals and periodically driven systems and to exchange knowledge and experience. Jagiellonian University in Kraków is one of the pioneers of the time crystal research which was initiated by Nobel Prize laureate, Frank Wilczek.

The workshop will be held at the Jagiellonian University in Krakow, 4-6 September 2019, in the XVII century historical Collegium Medicum building located in the city center of Krakow. See more at <https://timecrystals2019.org>
